TENTATIVE PROGRAM

The workshop is targeted to researchers and postgraduate students who are working closely with laboratory animals, especially rodents. As per mentioned in **IACUC UPM** policy:

1. It is the policy of UPM that proper measures be taken to ensure that all animals used in research, research training, teaching and biological testing activities are appropriately cared for and maintained in accordance to international standards.

2. All research, research training, teaching and biological testing activities must obtain the approval of the Institutional Animal Care and Use Committee (IACUC) before commencement of the said activities.

3. All personnel undertaking activities related to animal activities must be adequately trained and that the training be endorsed by the IACUC.

Did you know?

With growing concerns for the ethical use of animals in research, many countries have made it mandatory for all researchers to be proficient in the sciences of animals which include the proper management and handling, before being allowed to use them in their studies.
